

NAVICPMA04 EVALUATION FACTORS FOR AWARD - REPAIR (APR 2000)

The quantities shown on Attachment "A" for the initial ordering period reflect the number of repair actions per item which NAVICP anticipates during that period. The quantities set forth on Attachment "A" for the Option period(s) reflect the same information for these periods. These quantities are NAVICP'S best estimates at this time and are the quantities, which will be used in evaluating individual repair prices on a total cumulative repair price basis. These quantities are neither minimums nor maximums. The repair prices proposed for the initial ordering period will be valid throughout that period regardless of the number of units repaired. Likewise, repair prices proposed for each of the option period(s) will be valid for that entire period. (If the Government exercises its option(s) to extend the contract).

Any special test equipment, which you require for the operation of the repair contract, must be identified in your offer. The need for additional test equipment will be used as an evaluation factor in determining the total cost to the Government of your offer.

The evaluation factor will be determined by adding the cost of such test equipment to your offer.

The evaluation factor will be determined by adding the cost of such test equipment to your offer.

Prices shall be offered separately for the initial ordering period and each Option period for:

CAMMS II REPORTING -and- REPAIR SERVICES

Offers will be evaluated on the basis of the total of the prices proposed for CAMMS Reporting and Repair Services.

The foregoing evaluation shall be conducted for the initial ordering period and each of the Option period(s).

The total sum of the ordering periods shall be the ultimate element in determining the lowest offeror.

NOTE: See Section M

The Government reserves the right to make a multiple award if it is economically advantageous to do so.
